MARC DAX	64
PIERRE PAUL BROCA	66
CARL WERNICKE	71
HUGHLINGS JACKSON	75
FRITSCH AND HITZIG	78
FRIEDRICH L. GOLTZ	80
DAVID FERRIER	82
HERMANN MUNK	86
KORBINIAN BRODMANN	90
SHERRINGTON	93
The discovery of neurotransmitters	98
HENRY DALE	100
OTTO LOEWI	103
Ways by which neurons communicate	106
RITA LEVI-MONTALCINI	107
SPERRY	109

Chapter 2

INTRODUCTION IN THE NERVOUS SYSTEM

Basic division of the brain stem	142
Medulla oblongata	142
Pons	143
Cerebellum	143
Midbrain	143
Forebrain	144
Diencephalon	144
The basal nuclei or basal ganglia	146
Cerebral hemispheres	150
Cerebral cortex	151
White matter of the cerebral hemispheres	153

Chapter 3

MEDULLA OBLONGATA (OR BULB)

External structure	156
Internal structure	158
I. Level of motor (pyramidal) decussation	160
Dorsal column nuclei	160
Spinal trigeminal nucleus and its tracts	166
Other tracts	168
II. Level of sensory (lemniscal) decussation	169
Medial lemniscus	169
Medial longitudinal fasciculus (MLF)	170
Accessory cuneate nucleus	171

Arcuate nuclei	171
Area postrema	172
Cranial nerve nuclei	172
III. Level of olive	172
Medullary reticular formation	175
Cranial nerve nuclei of the medulla	178
Clinical considerations	181
The medulla and respiratory functions	201
The medulla and cardiovascular control	202
The medulla and swallowing	202
The medulla and sneezing	203
Neuroanatomy of yawning	203
Neuroanatomy of vomiting	204

Chapter 4

PONS

The ventral surface of the pons	210
The dorsal surface of the pons	211
Internal structure of the pons	212
Ventral (basilar) pons	212
Dorsal pons (pontine tegmentum)	214
Vestibular system	223
Vestibular apparatus	224
Bony labyrinth	224
Membranous labyrinth	225
Microstructure of the vestibular system	226
Utricle	229
Sacculle	230
Vestibulocochlear nuclei and nerve	231
The vestibular nerve and nuclei	231
Central pathways	232
Vestibular nuclear complex	233
Afferent projections (input) to the vestibular nuclei	234
Efferent projections (output) from the vestibular nuclei	238
The cochlear nerve and nuclei	252
Anatomy of hearing	255
Central transmission	258
The cochlear nuclei	259
Auditory pathways	261
Superior olivary nuclei	264
Lateral lemniscus	264
Inferior colliculus	265
Medial geniculate nucleus	266
Auditory cortex	268
The auditory pathway through the reticular formation	270
Descending auditory projections	270

Sound reflex	272
Sections of the pons	272
Caudal pons	272
Abducent nucleus and nerve	272
Unilateral MLF lesion: internuclear ophthalmoplegia	276
The one-and-a-half syndrome	276
The medial tegmental syndrome	277
Facial nucleus and nerve (CN VII)	277
Middle pons	283
Trigeminal nerve (CN V)	283
Trigeminal tracts	297
Trigeminal reflexes	311
Trigeminal neuralgia	315
Rostral pons	316
The ventral portion of the pons	317
The medial longitudinal fasciculus (MLF)	317
Superior cerebellar peduncle	318

Chapter 5

MIDBRAIN

Pretectal area	336
Tectum	337
The superior colliculi	337
Efferent connections	338
Afferent connections	340
The inferior colliculi	342
Afferent connections	342
Efferent connections	343
Tegmentum	344
Nuclear groups	345
The red nucleus	351
The posterior commissure	355
Basal portion of the midbrain	357
Cerebral peduncle	357
Substantia nigra	358
Mesencephalic dopaminergic cell groups	362
Pupillary reflexes	364
Supranuclear pathways for accommodation	367
Pupillodilation	368
Vertical gaze	369
Midbrain clinical correlates	370
Syndrome of Weber	371
Syndrome of Benedikt	372
Claude's syndrome	372
Nothnagel's syndrome	373
Plus-minus lid syndrome	373

Top of the basilar syndrome	373
Walleyed syndrome	374
Vertical one-and-a-half syndrome	374
Locked-in syndrome	374
Peduncular hallucinosis syndrome	375
Akinetic mutism	376
Decerebrate rigidity	376
Periaqueductal grey matter	377
Mesencephalic reticular formation	378

Chapter 6

RETICULAR FORMATION

Introduction	385
Organization of the RF	386
Neurons of the RF	386
Reticulospinal tracts	388
Medullary reticular formation	389
Afferent fibres to the medullary RF	391
Efferent fibres from the medullary RF	392
The pontine reticular formation	394
Mesencephalic reticular formation	398
Chemical specified systems	400
Monoaminergic system	401
Zones of the RF	402
Afferents to the RF	404
Efferents from the RF	404
Nuclei associated with the RF	404
Functions of the RF	405
Somatic motor function	405
The descending influences	405
Pontine (medial) reticulospinal tract	407
Medullary (lateral) reticulospinal tract	408
Corticoreticular fibres	409
Control of eye movements and other cranial nerve function	410
Somatic sensory function	412
Control of visceral functions	413
Respiration	414
Cardiovascular activity	415
Influence on the endocrine system	417
Ascending reticular activating system	417
Projections from the mesopontine tegmentum to the forebrain	419
Ascending reticular inhibitory system	426

Chapter 7

CEREBELLUM

Organization of the cerebellum	441
--------------------------------	-----

Morphological approach of the cerebellum.	442
Resp Functional approach of the cerebellum.	446
Gray and white matter	451
Cerebellar peduncles	452
Internal structure.	454
The intracerebellar nuclei	454
Afferents to the cerebellum.	461
Spinocerebellar and trigeminocerebellar fibres	462
Olivocerebellar fibres	466
Vestibulocerebellar fibres	468
Pontocerebellar fibres.	469
Reticulocerebellar fibres	469
Corticoreticulocerebellar pathway.	470
Mossy fibres	471
Climbing fibres	473
Efferents from the cerebellum.	476
Cerebellar circuitry	484
Details of cerebellar circuitry.	486
The cerebro-cerebellar circuit.	487
Cerebellar cortex	489
1. The molecular layer	491
2. The Purkinje cell layer.	493
3. The granular layer.	493
Cerebellar cortex – pharmacologic considerations.	500
Cerebellar cortex – physiology	501
Theories of cerebellar function	505
Cerebellum and cognition	509
Implicit learning.	509
Procedural learning.	510
Cerebellum and language.	511
Cerebellum and writing	513
Cerebellum, working memory, creativity and giftedness.	513
Clinical aspects.	516
Cognitive affective syndrome	525
Cerebellum and psychiatric disorders.	527
Cerebellum and behavioral syndrome	528
Agenesis of the cerebellum	530
Very pre-term infants	530

Chapter 8

DIENCEPHALON

EPITHALAMUS	547
Stria medullaris thalami	547
Habenular nuclei.	547
The Pineal gland.	547
Functions	549

Posterior commissure	551
THALAMUS	551
Anatomy	552
Borders	554
Lateral and external medullary laminae	555
Nuclear groups of the thalamus	556
Anterior nuclei	559
Intralaminar nuclei	561
Medial nuclei	564
Median nuclei	566
Metathalamic nuclei	567
Posterior nuclear complex	571
Pulvinar nuclei and lateral posterior nucleus	571
Reticular nucleus	573
Ventral nuclei	575
Neuronal circuitry	587
Functions of the thalamus	587
Clinical considerations	589
SUBTHALAMUS	591
Subthalamic nucleus	592
Forel's field H (prerubral field)	594
The zona incerta	595
HYPOTHALAMUS	596
Hypothalamic regions	598
Nuclei of the hypothalamic regions	599
Preoptic region	602
Suprachiasmatic (supraoptic) region	604
The anterior hypothalamic nucleus	605
Interstitial nuclei of the anterior hypothalamus	605
The paraventricular and supraoptic nuclei	606
Tuberal region	609
The dorsomedial nucleus	610
The ventromedial nucleus	610
The lateral hypothalamic nucleus	610
The arcuate (infundibular) nucleus	611
Mammillary region	612
Hypothalamic zones	613
Periventricular zone	614
Medial zone	615
Lateral zone	615
Ventrolateral preoptic nucleus	618
Connections of the hypothalamus	618
Local connections	618
Extrinsic connections	619
Afferent pathways to the hypothalamus	619
Fornix	619

Amygdalohypothalamic tract	621
Stria terminalis	621
Retinosuprachiasmatic tract	621
Thalamohypothalamic tract	621
Inferior mammillary peduncle	622
Dorsal longitudinal fasciculus of Schütz	622
Pallidohypothalamic fibres	622
Cerebellohypothalamic fibres	622
Fibres from the reticular formation	622
Spinohypothalamic fibres	623
Corticohypothalamic fibres	623
Medial forebrain bundle	623
Stria medullaris thalami	624
EFFERENT CONNECTIONS OF THE DIENCEPHALON	625
Fasciculus mammillary princeps	625
Mammillothalamic tract (tract of Vicq d'Azyr)	625
Mammillotegmental tract	626
Fornix	626
Mammillointerpeduncular tract	626
Diencephalic periventricular system	626
Dorsal longitudinal fasciculus	627
The medial forebrain bundle	627
Hypothalamospinal tract	628
Periventricular bundle	629
Hypothalamocerebellar fibres	629
Hypothalamothalamic fibres	629
Hypothalamoprefrontal fibres	629
Hypothalamocortical fibres	629
The supraopticohypophysial tract	630
The tuberohypophysial tract	631
Pituitary gland	631
Neurohypophysis	633
Adenohypophysis	636
Hypophysial portal system	639
HYPOTHALAMIC FUNCTIONS	643
The regulation of the neuroendocrine system	644
The parvocellular neurosecretory system	648
The hypothalamic neurons participate in four reflex classes	650
The reproduction function has a complex integration	653
Regulation of the autonomic nervous system and of vegetative functions	655
The hypothalamus and motivation	661
Regulation of body temperature	662
Regulation of hunger and the amount of food intake	669
The hypothalamus and the obesity	673
Hypothalamus, anorexia and emaciation	676
Drinking and thirst	678

Disorder of water balance	681
Diabetes insipidus	682
Essential hypernatremia syndrome	683
The syndrome of increased release of ADH and normal thirst	685
Other hypothalamic functions	686
Affective-emotional behavior control	688
Regulation of memory	693
Regulating the circadian rhythm	694
Circadian regulation on metabolism	702
Circadian regulation on sleep	703
Hypothalamic regulation of sleep	706

SECOND PART

Chapter 9

THE BASAL GANGLIA

Basal ganglia anatomical organization	739
The striatum	742
Caudate nucleus	743
Nucleus accumbens	746
Putamen	747
Globus pallidus	750
Subthalamic nucleus (nucleus of Luys)	754
Substantia nigra	757
Nuclei associated with the basal ganglia	758
The claustrum	758
Amygdaloid nucleus (amygdala)	758
Thalamic nuclei	758
Connections of the basal ganglia	759
Striatum	760
Afferent fibres (input)	760
Corticostriate fibres	760
Thalamostriate fibres	762
Nigrostriate fibres	762
Fibres from the ventral tegmental area	763
Fibres from the brainstem pedunculopontine tegmental nucleus	763
Efferent fibres (output)	763
The ansa system	764
The lenticular fasciculus	764
The thalamic fasciculus	766
Striatopallidal fibres	767
Striatonigral fibres	768
Ventral (limbic) striatum	769
Globus pallidus pathway	770
Afferent fibres (input)	770

Striatopallidal fibres	771
Subthalamopallidal fibres	771
Efferent fibres (output)	771
Pallidosubthalamic fibres	771
Pallidonigral fibres	773
Pallidothalamic fibres	773
Pallidotegmental fibres	774
Pallidohabenular fibres	774
The subthalamic pathway	774
Neurotransmitters of the basal ganglia	775
Glutamate-releasing neurons	775
GABA-releasing neurons	776
Dopamine-releasing neurons	776
Acetylcholine-releasing neurons	778
Noradrenergic and serotonergic system	778
Neuropeptide-releasing neurons	779
Opioid peptide precursor mRNA and opioid receptor levels in Parkinson's disease (PD) and levodopa-induced dyskinesia (LID)	779
Basal ganglia circuitry	780
Cortical-striatal-pallidal-thalamo-cortical circuits	781
Sensory-motor loop	783
Oculomotor loop	787
Association (cognitive) loop	787
Limbic loop pathway	788
Other circuits of the basal ganglia	788
Substantia nigra	788
Afferent fibres	788
Efferent fibres	788
Subthalamic nucleus	789
Afferent fibres	789
Efferent fibres	789
Pedunculopontine nucleus	789
Basal ganglia – subcortical loop	789
Direct and indirect pathways (loops)	790
Circuits that modulate activity of the basal ganglia	793
Basal ganglia functions	795
Motor function	796
Cognitive function	797
Gating function	798
The basal ganglia and learning	799
Emotion and motivation function of the basal ganglia	800
High-order cognition and working memory	801
The basal ganglia and automatic processing	805
The prefrontal cortex	807
Basal ganglia and cerebellum in motor function	808
Pathophysiology of basal ganglia disorders (Clinical considerations)	809

Hypertonicity and dyskinesias	810
Hyperkinetic disorders	811
Tremor	811
Chorea	811
Athetosis	812
Ballisme	812
Huntington's disease.	813
Dystonia	814
Tic disorder.	815
Tourette's syndrome	816
Hypokinetic disorders	817
Parkinson's disease	818
Wilson's disease.	828

Chapter 10

LIMBIC LOBE AND LIMBIC SYSTEM

Limbic lobe	850
Limbic system.	855
Parts of the limbic system.	857
Olfactory system.	857
Septum	860
Cingulate gyrus and cingulum	863
Alveus, fimbria, and fornix	866
Thalamus	869
Hypothalamus.	870
Locus ceruleus and dorsal raphe nucleus	870
Habenular nuclei.	871
Ventral tegmental area	871
Dorsal longitudinal fasciculus	871
Indusium griseum	871
Fasciola cinerea	873
Limbic functions	873
Limbic system and emotion	874
Negative and positive reinforcement	878
Limbic system and memory	878
Limbic system disorder.	881

Chapter 11

HIPPOCAMPAL FORMATION

Introduction.	891
Anatomy	892
Structure	894
Cornu Ammonis (hippocampus proper)	894
Regional variations	899
The cytoarchitectonic organization of the hippocampus.	901
The pyramidal layer	901

Molecular layer	903
Polymorphic layer	904
Interneurons	904
Hippocampal connections	907
Afferent fibres	907
Efferent fibres	909
Intrinsic circuitry of the hippocampal formation	910
Commissural connections of the hippocampus	911
Dentate gyrus	912
Afferents to the dentate gyrus	916
Efferents from the dentate gyrus	918
Subiculum	920
Intrinsic connections	920
Subicular efferents and afferents	921
Presubiculum and parasubiculum	922
Intrinsic connections	924
Commissural connections	923
Presubiculum projections to layer III of the entorhinal cortex	923
Intrahippocampal connections	924
Entorhinal cortex	924
Cytoarchitectonic organization	924
Associational connections	926
Commissural connections	926
Perforant and alvear pathway projections	926
Extrinsic connections	926
Transmitters and receptors of the hippocampal formation	929
Functional role of the human hippocampus	930
Learning and memory	930
Spatial representations of self and other in the hippocampus	939
Social-place cells in the hippocampus	939
Neurogenesis in the adult hippocampus	940
Motor control	946
Emotional behavior	946
Regulation of the hypothalamo-hypophysial axis	947
There is an inverted U-shape function between the level of stress and memory	948
Neurogenesis	949
Fast synaptic subcortical control of hippocampal circuits	951
The hippocampus and human diseases	952
Encephalitis and the hippocampus	953
Ischaemic damage to the hippocampus	954
Schizophrenia and the hippocampus	954
Hippocampal sclerosis	954
Neurotransmitter systems	960
GABAergic mechanisms	960
Adenosine	960

Opioid	960
NPY (neuropeptide Y)	961
Galanin	962
Alzheimer's disease	963

Chapter 12

AMYGDALA

Introduction	1004
Anatomical organization of the amygdala	1005
Connections	1008
Major pathways	1009
Subcortical connectivity	1010
Afferent connections	1010
Efferent connections	1012
Connections with the olfactory system	1015
Connections with the hippocampal formation	1015
Connections with neocortex	1015
Neurochemical modulation	1020
Functions of the amygdala	1021
The fear system and the seeking system	1027
Erasing fear memories	1031
The seeking system	1033
The amygdala in normal aging	1034
The human amygdala and fear	1035
The amygdala and learning	1039
The human amygdala and memory	1039
The role of the human amygdala in perception and attention	1042
The human amygdala in social function	1048
The human amygdala dysfunction	1052
The human amygdala in autism	1055
The human amygdala in schizophrenia	1059
The human amygdala in Alzheimer's disease	1060

Chapter 13

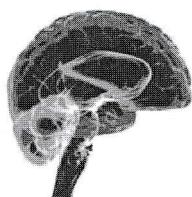

OLFACTORY SYSTEM

Olfactory receptors	1093
Olfactory transduction	1097
Olfactory bulb – secondary olfactory neurons	1099
Olfactory tract	1104
Olfactory striae	1105
Thalamic neurons	1109
Cortical neurons	1110
Olfactory cortex projections	1110
Efferent olfactory connections	1111
Disorders of the olfactory system	1111

HUGHLINGS JACKSON	75
FRITSCH AND HITZIG	78
FRIEDRICH L. GOLTZ	80
DAVID FERRIER	82
HERMANN MUNK	86
KORBINIAN BRODMANN	90
SHERRINGTON	93
The discovery of neurotransmitters	98
HENRY DALE	100
OTTO LOEWI	103
Ways by which neurons communicate	106
RITA LEVI-MONTALCINI	107
SPERRY	109

Chapter 2

INTRODUCTION IN THE NERVOUS SYSTEM

Basic division of the brain stem	142
Medulla oblongata	142
Pons	143
Cerebellum	143
Midbrain	143
Forebrain	144
Diencephalon	144
The basal nuclei or basal ganglia	146
Cerebral hemispheres	150
Cerebral cortex	151
White matter of the cerebral hemispheres	153

Chapter 3

MEDULLA OBLONGATA (OR BULB)

External structure	156
Internal structure	158
I. Level of motor (pyramidal) decussation	160
Dorsal column nuclei	160
Spinal trigeminal nucleus and its tracts	166
Other tracts	168
II. Level of sensory (lemniscal) decussation	169
Medial lemniscus	169
Medial longitudinal fasciculus (MLF)	170
Accessory cuneate nucleus	171

Arcuate nuclei	171
Area postrema	172
Cranial nerve nuclei	172
III. Level of olive	172
Medullary reticular formation	175
Cranial nerve nuclei of the medulla	178
Clinical considerations	181
The medulla and respiratory functions	201
The medulla and cardiovascular control	202
The medulla and swallowing	202
The medulla and sneezing	203
Neuroanatomy of yawning	203
Neuroanatomy of vomiting	204

Chapter 4

PONS

The ventral surface of the pons	210
The dorsal surface of the pons	211
Internal structure of the pons	212
Ventral (basilar) pons	212
Dorsal pons (pontine tegmentum)	214
Vestibular system	223
Vestibular apparatus	224
Bony labyrinth	224
Membranous labyrinth	225
Microstructure of the vestibular system	226
Utricle	229
Sacculle	230
Vestibulocochlear nuclei and nerve	231
The vestibular nerve and nuclei	231
Central pathways	232
Vestibular nuclear complex	233
Afferent projections (input) to the vestibular nuclei	234
Efferent projections (output) from the vestibular nuclei	238
The cochlear nerve and nuclei	252
Anatomy of hearing	255
Central transmission	258
The cochlear nuclei	259
Auditory pathways	261
Superior olivary nuclei	264
Lateral lemniscus	264
Inferior colliculus	265
Medial geniculate nucleus	266
Auditory cortex	268
The auditory pathway through the reticular formation	270
Descending auditory projections	270

Sound reflex	272
Sections of the pons	272
Caudal pons	272
Abducent nucleus and nerve	272
Unilateral MLF lesion: internuclear ophthalmoplegia	276
The one-and-a-half syndrome	276
The medial tegmental syndrome	277
Facial nucleus and nerve (CN VII)	277
Middle pons	283
Trigeminal nerve (CN V)	283
Trigeminal tracts	297
Trigeminal reflexes	311
Trigeminal neuralgia	315
Rostral pons	316
The ventral portion of the pons	317
The medial longitudinal fasciculus (MLF)	317
Superior cerebellar peduncle	318

Chapter 5

MIDBRAIN

Pretectal area	336
Tectum	337
The superior colliculi	337
Efferent connections	338
Afferent connections	340
The inferior colliculi	342
Afferent connections	342
Efferent connections	343
Tegmentum	344
Nuclear groups	345
The red nucleus	351
The posterior commissure	355
Basal portion of the midbrain	357
Cerebral peduncle	357
Substantia nigra	358
Mesencephalic dopaminergic cell groups	362
Pupillary reflexes	364
Supranuclear pathways for accommodation	367
Pupillodilation	368
Vertical gaze	369
Midbrain clinical correlates	370
Syndrome of Weber	371
Syndrome of Benedikt	372
Claude's syndrome	372
Nothnagel's syndrome	373
Plus-minus lid syndrome	373

Top of the basilar syndrome	373
Walleyed syndrome	374
Vertical one-and-a-half syndrome	374
Locked-in syndrome	374
Peduncular hallucinosis syndrome	375
Akinetic mutism	376
Decerebrate rigidity	376
Periaqueductal grey matter	377
Mesencephalic reticular formation	378

Chapter 6

RETICULAR FORMATION

Introduction	385
Organization of the RF	386
Neurons of the RF	386
Reticulospinal tracts	388
Medullary reticular formation	389
Afferent fibres to the medullary RF	391
Efferent fibres from the medullary RF	392
The pontine reticular formation	394
Mesencephalic reticular formation	398
Chemical specified systems	400
Monoaminergic system	401
Zones of the RF	402
Afferents to the RF	404
Efferents from the RF	404
Nuclei associated with the RF	404
Functions of the RF	405
Somatic motor function	405
The descending influences	405
Pontine (medial) reticulospinal tract	407
Medullary (lateral) reticulospinal tract	408
Corticoreticular fibres	409
Control of eye movements and other cranial nerve function	410
Somatic sensory function	412
Control of visceral functions	413
Respiration	414
Cardiovascular activity	415
Influence on the endocrine system	417
Ascending reticular activating system	417
Projections from the mesopontine tegmentum to the forebrain	419
Ascending reticular inhibitory system	426

Chapter 7

CEREBELLUM

Organization of the cerebellum	441
--------------------------------------	-----

Morphological approach of the cerebellum	442
Functional approach of the cerebellum	446
Gray and white matter	451
Cerebellar peduncles	452
Internal structure	454
The intracerebellar nuclei	454
Afferents to the cerebellum	461
Spinocerebellar and trigeminocerebellar fibres	462
Olivocerebellar fibres	466
Vestibulocerebellar fibres	468
Pontocerebellar fibres	469
Reticulocerebellar fibres	469
Corticoreticulocerebellar pathway	470
Mossy fibres	471
Climbing fibres	473
Efferents from the cerebellum	476
Cerebellar circuitry	484
Details of cerebellar circuitry	486
The cerebro-cerebellar circuit	487
Cerebellar cortex	489
1. The molecular layer	491
2. The Purkinje cell layer	493
3. The granular layer	493
Cerebellar cortex – pharmacologic considerations	500
Cerebellar cortex – physiology	501
Theories of cerebellar function	505
Cerebellum and cognition	509
Implicit learning	509
Procedural learning	510
Cerebellum and language	511
Cerebellum and writing	513
Cerebellum, working memory, creativity and giftedness	513
Clinical aspects	516
Cognitive affective syndrome	525
Cerebellum and psychiatric disorders	527
Cerebellum and behavioral syndrome	528
Agenesis of the cerebellum	530
Very pre-term infants	530

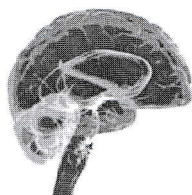

Chapter 8

Diencephalon

EPITHALAMUS	547
Stria medullaris thalami	547
Habenular nuclei	547
The Pineal gland	547
Functions	549

Functional Neuroanatomy of the Brain

Third Part

Chronological and professional information	XXXI
Foreword	XLIV

FIRST PART

Chapter 1

HISTORY OF THE BRAIN AND MIND

Introduction	1
Egyptian physician Imhotep	9
The Ebers Papyrus	11
Three faces of Greece and Hippocrates	12
1. Early Greece	12
2. The Golden Age of Greece	13
ALCMAEON OF CROTON	14
HIPPOCRATES	17
3. The Hellenistic Era	20
PLATO	22
ARISTOTLE	22
GALEN	23
The Middle Ages	26
RHAZES	26
ESMAIL JORJANI	26
AVICENNA	28
MONDINO DE' LIUZZI	31
The Renaissance	31
LEONARDO DA VINCI	32
JACOPO BERENGARIO DA CARPI	32
VESALIUS	32
GABRIELE FALLOPIO	35
GIULIO CASSERIO	35
JOHANN VESLING	36
JOHANN JAKOB WEPFER	36
RENÉ DESCARTES	36
PACCHIONI	38
LANCISI	39
WILLIS	41
SWEDENBORG	44
THE 4 GENERATIONS OF THE MECKEL FAMILY	45
GALVANI	54
VOLTA	55
GALL (PHRENOLOGY)	56
FLOURENS	60

Sound reflex	272
Sections of the pons	272
Caudal pons	272
Abducent nucleus and nerve	272
Unilateral MLF lesion: internuclear ophthalmoplegia	276
The one-and-a-half syndrome	276
The medial tegmental syndrome	277
Facial nucleus and nerve (CN VII)	277
Middle pons	283
Trigeminal nerve (CN V)	283
Trigeminal tracts	297
Trigeminal reflexes	311
Trigeminal neuralgia	315
Rostral pons	316
The ventral portion of the pons	317
The medial longitudinal fasciculus (MLF)	317
Superior cerebellar peduncle	318

Chapter 5

MIDBRAIN

Pretectal area	336
Tectum	337
The superior colliculi	337
Efferent connections	338
Afferent connections	340
The inferior colliculi	342
Afferent connections	342
Efferent connections	343
Tegmentum	344
Nuclear groups	345
The red nucleus	351
The posterior commissure	355
Basal portion of the midbrain	357
Cerebral peduncle	357
Substantia nigra	358
Mesencephalic dopaminergic cell groups	362
Pupillary reflexes	364
Supranuclear pathways for accommodation	367
Pupillodilation	368
Vertical gaze	369
Midbrain clinical correlates	370
Syndrome of Weber	371
Syndrome of Benedikt	372
Claude's syndrome	372
Nothnagel's syndrome	373
Plus-minus lid syndrome	373

Top of the basilar syndrome	373
Walleyed syndrome	374
Vertical one-and-a-half syndrome	374
Locked-in syndrome	374
Peduncular hallucinosis syndrome	375
Akinetic mutism	376
Decerebrate rigidity	376
Periaqueductal grey matter	377
Mesencephalic reticular formation	378

Chapter 6

RETICULAR FORMATION

Introduction	385
Organization of the RF	386
Neurons of the RF	386
Reticulospinal tracts	388
Medullary reticular formation	389
Afferent fibres to the medullary RF	391
Efferent fibres from the medullary RF	392
The pontine reticular formation	394
Mesencephalic reticular formation	398
Chemical specified systems	400
Monoaminergic system	401
Zones of the RF	402
Afferents to the RF	404
Efferents from the RF	404
Nuclei associated with the RF	404
Functions of the RF	405
Somatic motor function	405
The descending influences	405
Pontine (medial) reticulospinal tract	407
Medullary (lateral) reticulospinal tract	408
Corticoreticular fibres	409
Control of eye movements and other cranial nerve function	410
Somatic sensory function	412
Control of visceral functions	413
Respiration	414
Cardiovascular activity	415
Influence on the endocrine system	417
Ascending reticular activating system	417
Projections from the mesopontine tegmentum to the forebrain	419
Ascending reticular inhibitory system	426

Chapter 7

CEREBELLUM

Organization of the cerebellum	441
--	-----

Morphological approach of the cerebellum	442
Functional approach of the cerebellum	446
Gray and white matter	451
Cerebellar peduncles	452
Internal structure	454
The intracerebellar nuclei	454
Afferents to the cerebellum	461
Spinocerebellar and trigeminocerebellar fibres	462
Olivocerebellar fibres	466
Vestibulocerebellar fibres	468
Pontocerebellar fibres	469
Reticulocerebellar fibres	469
Corticoreticulocerebellar pathway	470
Mossy fibres	471
Climbing fibres	473
Efferents from the cerebellum	476
Cerebellar circuitry	484
Details of cerebellar circuitry	486
The cerebro-cerebellar circuit	487
Cerebellar cortex	489
1. The molecular layer	491
2. The Purkinje cell layer	493
3. The granular layer	493
Cerebellar cortex – pharmacologic considerations	500
Cerebellar cortex – physiology	501
Theories of cerebellar function	505
Cerebellum and cognition	509
Implicit learning	509
Procedural learning	510
Cerebellum and language	511
Cerebellum and writing	513
Cerebellum, working memory, creativity and giftedness	513
Clinical aspects	516
Cognitive affective syndrome	525
Cerebellum and psychiatric disorders	527
Cerebellum and behavioral syndrome	528
Agenesis of the cerebellum	530
Very pre-term infants	530

Chapter 8

Diencephalon

EPITHALAMUS	547
Stria medullaris thalami	547
Habenular nuclei	547
The Pineal gland	547
Functions	549

Posterior commissure	551
THALAMUS	551
Anatomy	552
Borders	554
Lateral and external medullary laminae	555
Nuclear groups of the thalamus	556
Anterior nuclei	559
Intralaminar nuclei	561
Medial nuclei	564
Median nuclei	566
Metathalamic nuclei	567
Posterior nuclear complex	571
Pulvinar nuclei and lateral posterior nucleus	571
Reticular nucleus	573
Ventral nuclei	575
Neuronal circuitry	587
Functions of the thalamus	587
Clinical considerations	589
SUBTHALAMUS	591
Subthalamic nucleus	592
Forel's field H (prerubral field)	594
The zona incerta	595
HYPOTHALAMUS	596
Hypothalamic regions	598
Nuclei of the hypothalamic regions	599
Preoptic region	602
Suprachiasmatic (supraoptic) region	604
The anterior hypothalamic nucleus	605
Interstitial nuclei of the anterior hypothalamus	605
The paraventricular and supraoptic nuclei	606
Tuberal region	609
The dorsomedial nucleus	610
The ventromedial nucleus	610
The lateral hypothalamic nucleus	610
The arcuate (infundibular) nucleus	611
Mammillary region	612
Hypothalamic zones	613
Periventricular zone	614
Medial zone	615
Lateral zone	615
Ventrolateral preoptic nucleus	618
Connections of the hypothalamus	618
Local connections	618
Extrinsic connections	619
Afferent pathways to the hypothalamus	619
Fornix	619

Amygdalohypothalamic tract	621
Stria terminalis	621
Retinosuprachiasmatic tract	621
Thalamohypothalamic tract	621
Inferior mammillary peduncle	622
Dorsal longitudinal fasciculus of Schütz	622
Pallidohypothalamic fibres	622
Cerebellohypothalamic fibres	622
Fibres from the reticular formation	622
Spinohypothalamic fibres	623
Corticohypothalamic fibres	623
Medial forebrain bundle	623
Stria medullaris thalami	624
EFFERENT CONNECTIONS OF THE DIENCEPHALON	625
Fasciculus mammillary princeps	625
Mammillothalamic tract (tract of Vicq d'Azyr)	625
Mammillotegmental tract	626
Fornix	626
Mammillointerpeduncular tract	626
Diencephalic periventricular system	626
Dorsal longitudinal fasciculus	627
The medial forebrain bundle	627
Hypothalamospinal tract	628
Periventricular bundle	629
Hypothalamocerebellar fibres	629
Hypothalamothalamic fibres	629
Hypothalamoprefrontal fibres	629
Hypothalamocortical fibres	629
The supraopticohypophysial tract	630
The tuberohypophysial tract	631
Pituitary gland	631
Neurohypophysis	633
Adenohypophysis	636
Hypophysial portal system	639
HYPOTHALAMIC FUNCTIONS	643
The regulation of the neuroendocrine system	644
The parvocellular neurosecretory system	648
The hypothalamic neurons participate in four reflex classes	650
The reproduction function has a complex integration	653
Regulation of the autonomic nervous system and of vegetative functions	655
The hypothalamus and motivation	661
Regulation of body temperature	662
Regulation of hunger and the amount of food intake	669
The hypothalamus and the obesity	673
Hypothalamus, anorexia and emaciation	676
Drinking and thirst	678
